

**Dry Creek:** Upper end of the channel in Alpine and Highland needs to be cleaned and fallen trees removed. Some areas also need to be restored.

**Dry Creek**

**Dry Creek debris basin:** The basin is full, creating potential for flooding in Lehi. The basin also needs to be improved in cooperation with the North Utah County Water Conservancy District.

**Dry Creek waste ditch:** Undersize culverts need to be replaced and three miles of channel need to be restored. Two replacement culverts, channel improvements and pond dredging are needed in Willow Park.

**Provo River:** An estimated 800 to 1,000 dead trees need to be removed from the channel.

# Potential flood danger

UTAH COUNTY  
*The Utah County Commission is exploring the possibility of creating a countywide flood-control program to better handle storm water from heavy rainfall or heavy snow melts. Areas of concern include:*

**Provo River**

Utah Lake

**Santaquin debris basin**

**Santaquin debris basin:** The basin needs to be cleaned and the overflow channel maintained. A proper drainage channel needs to be developed from the basin to Utah Lake.
